Adding Collectibles to a Group

Context:
The collector has created an account and is currently logged in. The collector has at least one collectible in their collection. The collector is viewing their collection.

Primary:
1. The collector selects the collectible/collectibles they would like to add to a group.
2. The collector assigns the collectible to an existing group
3. System notifies the collector that the selected collectible/collectibles has been added to the group.

Alternative:

Creates group for selected collectibles

a2) The collector creates a new group to assign the selected collectible or collectibles to

a3) The collector enters valid information to create a group

Return to 3

Collector enters invalid group information

a3) The collector enters invalid information to create a group

a4) System notifies the collector that the information was invalid and prompts them to enter valid information until it is valid.
